

Empowering Businesses with Diagnostic Excellence.

Keep your employees safe from all COVID-19 variants with testing solutions from Sound Health and Biovision Diagnostics.

We partner with businesses of all sizes, utilizing the best testing methods and most efficient processes to give your team the confidence you need during this critical time of resurgence due to mutant strains such as the **Delta** and **Lambda** variants.

Sound Health has partnered with Biovision Diagnostics to offer a proprietary PCR test program that can detect any, and **all COVID-19 variants** within 48 hours turnaround time, so you can safely and appropriately care for your team.

- Our rtPCR test targets the Rd/Rp and E Gene, which picks up mutant variants that other PCR tests may miss.
- Our patented Co-Primer primer architecture eliminates false positives and false negatives, giving you confidence in your results.

Your goal is to keep your employees safe and your business running. Our goal is to make it easier, faster, and more affordable for you to do so.
